

# Syed Muhammad Rehan

Systems & Automation Specialist | Client-Facing Implementation | Applied AI

+92 335 5685701 | rehankaneki@gmail.com | linkedin.com/in/relinxx | github.com/relinxx | Rawalpindi, Pakistan

## PROFESSIONAL PROFILE

---

Software Engineer with **1.5 years of professional experience** delivering automation, integration, AI, and data systems for internal operations and international clients. Experienced in converting ambiguous business requirements into dependable workflows, APIs, data pipelines, approval routes, quality controls, dashboards and conversational interfaces. Comfortable owning implementation from discovery and system analysis through testing, deployment, client walkthroughs, troubleshooting, and documentation in remote, cross-functional environments.

## TECHNICAL AND DELIVERY SKILLS

---

**Workflow Automation:** n8n, webhook triggers, REST APIs, JSON payloads, conditional routing, parallel branches, human-in-the-loop approvals, retries, error workflows, audit logging, scheduled jobs, structured outputs

**Integration Engineering:** Python, FastAPI, Node.js, Azure Functions, Microsoft Graph, SharePoint, Microsoft Teams, Bot Framework, Direct Line, Web Chat, MCP, SSE, WebSockets

**Data and Reporting Foundations:** SQL, Azure SQL, PostgreSQL/pgvector, SQLite, MongoDB, schema analysis, data validation, transformation, deduplication, persistence, result formatting, operational reporting

**AI-Enabled Systems:** LLM agents, RAG, Azure OpenAI, Azure AI Search, Copilot Studio, LangChain, LangGraph, Qdrant, ChromaDB, classification, extraction, risk analysis, retrieval evaluation

**Reliability and QA:** Playwright, workflow test cases, acceptance criteria, negative testing, URL/path safety, read-only controls, validation gates, timeouts, retries, monitoring, troubleshooting

**Client and Team Delivery:** requirement discovery, system analysis, implementation planning, technical presentations, progress and timeline updates, actionable recommendations, documentation, handover, stakeholder support

**Platforms and Tools:** Azure, Docker, Kubernetes, Linux, Git/GitHub, GitHub Actions, Ollama, Aider; slight professional exposure to React and TypeScript

## PROFESSIONAL EXPERIENCE

---

### Logic Powered Solutions

*Software Engineer*

Aug 2025 – Present

*F-5, Islamabad, Pakistan*

- Served as **sole implementation engineer** for Watermark Constructions' knowledge and data automation engagement from Aug 2025 to early Jun 2026; owned technical discovery, architecture, implementation, integrations, QA, cloud deployment, demonstrations, troubleshooting, documentation, and direct client communication while project management was handled separately.
- Delivered the first paid custom knowledge workflow using Python, ChromaDB, BGE embeddings, OCR, hierarchical retrieval, query expansion, multimodal retrieval, reciprocal-rank fusion, reranking, LangGraph, and grounded response generation.
- Re-engineered the solution around the client's Microsoft environment by integrating SharePoint Online, Azure AI Search, Azure OpenAI, Entra ID, Copilot Studio, and Teams, with incremental indexing and source-cited answers.
- Scaled the final retrieval layer to **20,934 indexed records**; designed a repeatable 15-case QA suite and improved Copilot Studio marked passes from **11/15 to 15/15** through retrieval, instruction, and grounding refinements.
- Designed a natural-language data workflow spanning **3 Azure SQL databases**, combining database routing, bounded schema selection, foreign-key context, validation, read-only enforcement, result limits, timeouts, correction retries, short-turn context, and business-friendly output formatting.
- Deployed the SQL workflow through Azure Functions and Azure Bot Service with Azure OpenAI, Key Vault, encrypted database connectivity, Teams, Direct Line, and Web Chat channels.
- Led technical client walkthroughs, communicated implementation status and constraints, gathered feedback, diagnosed system behavior, and produced test material and handover documentation for non-technical and technical stakeholders.
- Built additional n8n, QA, local-agent, computer-vision, and accounting solutions, applying reusable workflow components, API integrations, validation gates, and controlled human review.

### A Hamson

*AI/ML Intern*

Jun 2025 – Aug 2025

*Islamabad, Pakistan*

- Developed an internal LangChain knowledge assistant, containerized Python services with Docker, supported Kubernetes workflows, and contributed to database and web-interface reliability.
- Worked across engineering tasks with changing requirements, documented implementation details, and supported issue diagnosis and iterative delivery.

SELECTED AUTOMATION AND SYSTEMS PROJECTS

- Multi-Agent RAG Research Pipeline** | *n8n, FastAPI, Webhooks, Qdrant, PostgreSQL, LLM Agents*

Automation project

  - Built a webhook-driven research workflow that checks upstream service health, queries multiple sources, merges fallbacks, deduplicates and scores evidence, and persists selected material to a vector store.
  - Orchestrated specialized research, review, revision, and synthesis agents with memory, quality-score routing, structured-output validation, PostgreSQL storage, monitoring, success responses, and a separate error-notification path.
- AI Leadership Briefing and Approval Workflow** | *n8n, Forms, AI Agents, Human Approval*

Automation project

  - Designed an intake-to-decision pipeline with form normalization, duplicate checks, AI issue classification, structured information extraction, risk analysis, validation routing, and formatted approval requests.
  - Implemented human decision branches for approval, rejection, revision, and unknown outcomes; generated executive briefings for approved items and recorded final actions for auditability.
- Enterprise Knowledge and Data Automation** | *Azure AI Search, SharePoint, Azure SQL, Teams*

Watermark Constructions

  - Delivered two client-facing systems: a SharePoint-grounded knowledge assistant and a read-only natural-language analytics assistant spanning three operational databases.
  - Owned implementation and client-facing technical delivery for two related employer engagements publicly listed at a combined AUD 44,700; this is employer contract value, not personal compensation.
- Autonomous QA Application** | *Node.js, GPT-4o, Playwright, MCP, SSE* | GitHub

  - Built an agent that receives browser state through MCP, discovers application flows, generates and executes tests, and streams progress and results through SSE.
  - Implemented optional API-schema guidance, generated-test management, URL validation, path-safety controls, and environment-based configuration.
- Local Forge** | *Ollama, Aider, FastAPI, SQLite, Git Worktrees*

Employer project

  - Built a local-first coding workflow that analyzes references, plans changes, isolates work in Git worktrees, runs configurable verification commands, and requires explicit approval or rejection before integration.
- Accounting Operations Platform** | *FastAPI, React, Authentication, REST APIs*

Employer project, in development

  - Contributing authentication, profile, and dashboard foundations for an accounting platform; financial workflows and third-party accounting integrations remain under active development.

EDUCATION

- FAST University**

2021 – 2026

*B.Sc. Software Engineering, Completed*

Pakistan

  - Final Year Project: GeoVision, a multi-agent planning system combining ML scoring, RAG, GIS optimization, FastAPI, and React.

CREDENTIALS

- Build AI Agents with n8n** | LinkedIn Learning

Jun 2026
- Microsoft Azure Essentials Professional Certificate** | Microsoft/LinkedIn

Jun 2026
- Azure for Developers: Retrieval-Augmented Generation with Azure AI**

Jun 2026
- Vector Databases Professional Certificate** | Weaviate

Jun 2026
- Practical GitHub Actions** | LinkedIn Learning

Jun 2026

ADDITIONAL INFORMATION

- Remote Collaboration:**

International client meetings, remote technical demonstrations, asynchronous progress reporting, requirement clarification, troubleshooting, and handover support
- Languages:**

English professional working proficiency; Urdu native
- Platform Adaptability:**

Hands-on visual automation experience in n8n and API/webhook integrations; prepared to transfer these patterns quickly to Zapier, GoHighLevel, CRM, reporting, and project-management ecosystems
