

Syed Muhammad Rehan

Agentic AI | Software Development | Systems Automation

Rawalpindi, Pakistan | +92 335 5685701 | rehankaneki@gmail.com

linkedin.com/in/relinxx | github.com/relinxx

Professional Summary

Software engineer and senior systems automation specialist developing multi-agent workflows, RAG assistants, and API integrations for international clients. Hands-on with Python, FastAPI, Node.js, LangGraph, n8n, and Azure, from architecture and agent orchestration through evaluation and deployment. Currently responsible for CRM integration QA and technical delivery at Builders of Authority.

Core Skills

Agentic AI: LangGraph, LangChain, RAG, Azure OpenAI, Copilot Studio, MCP, multi-agent orchestration, memory, structured outputs, human approval, retrieval evaluation.

Development: Python, FastAPI, Node.js, REST APIs, webhooks, SQL, Azure SQL, PostgreSQL/pgvector, Qdrant, Azure Functions, Azure AI Search, Docker, Git, Playwright, SSE.

Automation: n8n, Zapier, GoHighLevel, WhatConverts, Salesforce, ClickUp, conditional routing, retries, data validation, integration QA, monitoring.

Professional Experience

Builders of Authority

Sep 2026 – Present

Senior Systems Automation Specialist

Remote

- Deliver CRM integration workflows for lead capture and quote/sales attribution; translate business requirements into event mappings and validation criteria.
- Debug WhatConverts-to-Salesforce synchronization through Zapier execution logs and record checks; identify missing data, duplicates, and test-data exceptions.
- Validate workflow routing and recovery decisions; configure GoHighLevel subaccounts and document QA evidence, dependencies, and handover in ClickUp.

Logic Powered Solutions

Aug 2025 – 31 Aug 2026

Software Engineer

Islamabad, Pakistan

- Owned architecture, development, QA, and Azure deployment as sole implementation engineer for Watermark Constructions' knowledge and analytics assistants.
- Developed Python/LangGraph RAG pipelines with retrieval and reranking; scaled to **20,934 indexed records** and improved a defined evaluation from **11/15 to 15/15 marked passes**.
- Built a natural-language SQL assistant across **three Azure SQL databases**, with schema routing, read-only validation, correction retries, Key Vault, and Teams integration.
- Developed n8n AI workflows with API orchestration, classification/extraction, human decision branches, PostgreSQL persistence, and failure handling.

A Hamson

Jun 2025 – Aug 2025

AI/ML Intern

Islamabad, Pakistan

- Developed a LangChain knowledge assistant, containerized Python services with Docker, and supported Kubernetes, database integration, and web-interface reliability.

Selected Agentic AI Projects

Multi-Agent Research Pipeline | n8n, FastAPI, Qdrant, PostgreSQL

Orchestrated research, review, revision, and synthesis agents with memory, quality routing, fallback retrieval, validation, and persistence.

Autonomous QA Application | Node.js, Playwright, MCP, SSE

Built a browser QA agent using MCP and Playwright for flow discovery, test generation/execution, URL/path checks, and streamed results.

AI Briefing and Approval Workflow | n8n, AI Agents, Human Review

Built classification, extraction, and risk-analysis stages with human approval/revision, executive briefings, and decision audit logs.

Education and Credentials

FAST University

2022 – 2026

B.Sc. Software Engineering, completed

Pakistan

Credentials: Build AI Agents with n8n; Microsoft Azure Essentials Professional Certificate; Azure RAG with Azure AI; Weaviate Vector Databases Professional Certificate; Practical GitHub Actions.
