

Syed Muhammad Rehan

Systems & Automation Specialist | Client-Facing Implementation
+92 335 5685701 | rehankaneki@gmail.com | linkedin.com/in/relinxx | github.com/relinxx | Rawalpindi, Pakistan

SUMMARY

Software Engineer with **1.5 years of professional experience** building automation, integration, AI, and data systems for internal teams and international clients. Owns solutions from requirement discovery and architecture through implementation, QA, deployment, walkthroughs, troubleshooting, and documentation. Hands-on with n8n, APIs, webhooks, databases, Azure services, human-in-the-loop workflows, and production-oriented validation and monitoring.

CORE SKILLS

Automation and Integration: n8n, REST APIs, webhooks, JSON, workflow orchestration, branching, human approvals, retry/error paths, audit logging, MCP, Playwright, SSE

Systems and Data: Python, FastAPI, Node.js, Azure Functions, Azure Bot Service, SQL, Azure SQL, PostgreSQL/pgvector, SQLite, SharePoint, Microsoft Teams, Key Vault, Docker, Git

Client Delivery and QA: requirement discovery, system analysis, implementation planning, test design, workflow validation, technical demonstrations, progress communication, troubleshooting, handover documentation

AI Automation: LLM agents, RAG, Azure OpenAI, Azure AI Search, Copilot Studio, LangChain, LangGraph, structured extraction, classification, risk analysis, retrieval evaluation

PROFESSIONAL EXPERIENCE

Logic Powered Solutions

Software Engineer

Aug 2025 – Present

F-5, Islamabad, Pakistan

- Acted as **sole implementation engineer** for Watermark Constructions' paid enterprise engagement, translating stakeholder requirements into two integrated assistants and owning architecture, development, QA, Azure deployment, client walkthroughs, issue resolution, and handover documentation.
- Integrated SharePoint, Azure AI Search, Azure OpenAI, Copilot Studio, and Teams into a citation-grounded knowledge workflow; scaled retrieval to **20,934 indexed records** and improved a 15-case evaluation from **11/15 to 15/15 marked passes**.
- Built a secure natural-language SQL workflow across **3 Azure SQL databases** with schema routing, validation, read-only controls, result limits, retries, short-turn context, Key Vault, Azure Functions, Bot Service, Teams, Direct Line, and Web Chat.
- Designed n8n automations with webhook triggers, API orchestration, normalization, deduplication, AI classification/extraction, risk routing, human approval, structured outputs, PostgreSQL persistence, monitoring, and explicit failure paths.
- Created test sets, technical documentation, implementation updates, and client-facing demonstrations that explained system behavior and trade-offs to technical and non-technical stakeholders.

A Hamson

AI/ML Intern

Jun 2025 – Aug 2025

Islamabad, Pakistan

- Built an internal LangChain knowledge workflow, containerized Python services with Docker, and supported Kubernetes, database, and web-interface reliability work.

AUTOMATION PROJECTS

Multi-Agent RAG Research Pipeline | *n8n, FastAPI, Webhooks, Qdrant, PostgreSQL, LLM Agents*

- Orchestrated multi-source research, health checks, fallback routing, deduplication/scoring, vector ingestion, researcher/reviewer/revision agents, quality thresholds, structured synthesis, persistence, monitoring, and error notification.

AI Leadership Briefing and Approval Workflow | *n8n, Forms, AI Agents, Human Approval*

- Automated intake-to-decision processing with duplicate detection, classification, structured extraction, risk analysis, validation, human approval routes, executive briefing generation, and approval audit logs.

Autonomous QA Application | *Node.js, Playwright, MCP, SSE | GitHub*

- Built an agent that discovers browser workflows, generates and executes tests, validates URLs and paths, and streams execution progress and results.

EDUCATION AND CREDENTIALS

FAST University

B.Sc. Software Engineering, Completed

2021 – 2026

Pakistan

- Build AI Agents with n8n; Microsoft Azure Essentials; Azure RAG with Azure AI; Weaviate Vector Databases Professional Certificate; Practical GitHub Actions.

ADDITIONAL FIT

Remote Collaboration: International client meetings, technical walkthroughs, asynchronous progress updates, troubleshooting, and handover support.

Platform Adaptability: Hands-on n8n and API/webhook integration experience with transferable patterns for Zapier, GoHighLevel, CRM, reporting, and project-management ecosystems.
